Data Driven Mine-to-Mill Optimization with MineSense Solutions

Miguel Carrera
2023

PRESENTATION OVERVIEW

- 1 MineSense Technologies
- 2 Mine-to-Mill data gap
- 3 MineSense Mine-to-Mill Optimization
- 5 Conclusions

PRESENTATION OVERVIEW

- 1 MineSense Technologies
- 2 Mine-to-Mill data gap
- 3 MineSense Mine-to-Mill Optimization
- 4 Conclusions

MineSense Technologies

Unique technological solution in the world

- Canadian company with headquarters in Vancouver.
- Regional Office and Service Center in Santiago de Chile.
- Presence in markets of America (North/South), Africa and Asia.
- Global cleantech company
- + 150 employees in the world
- + 12 years in the market

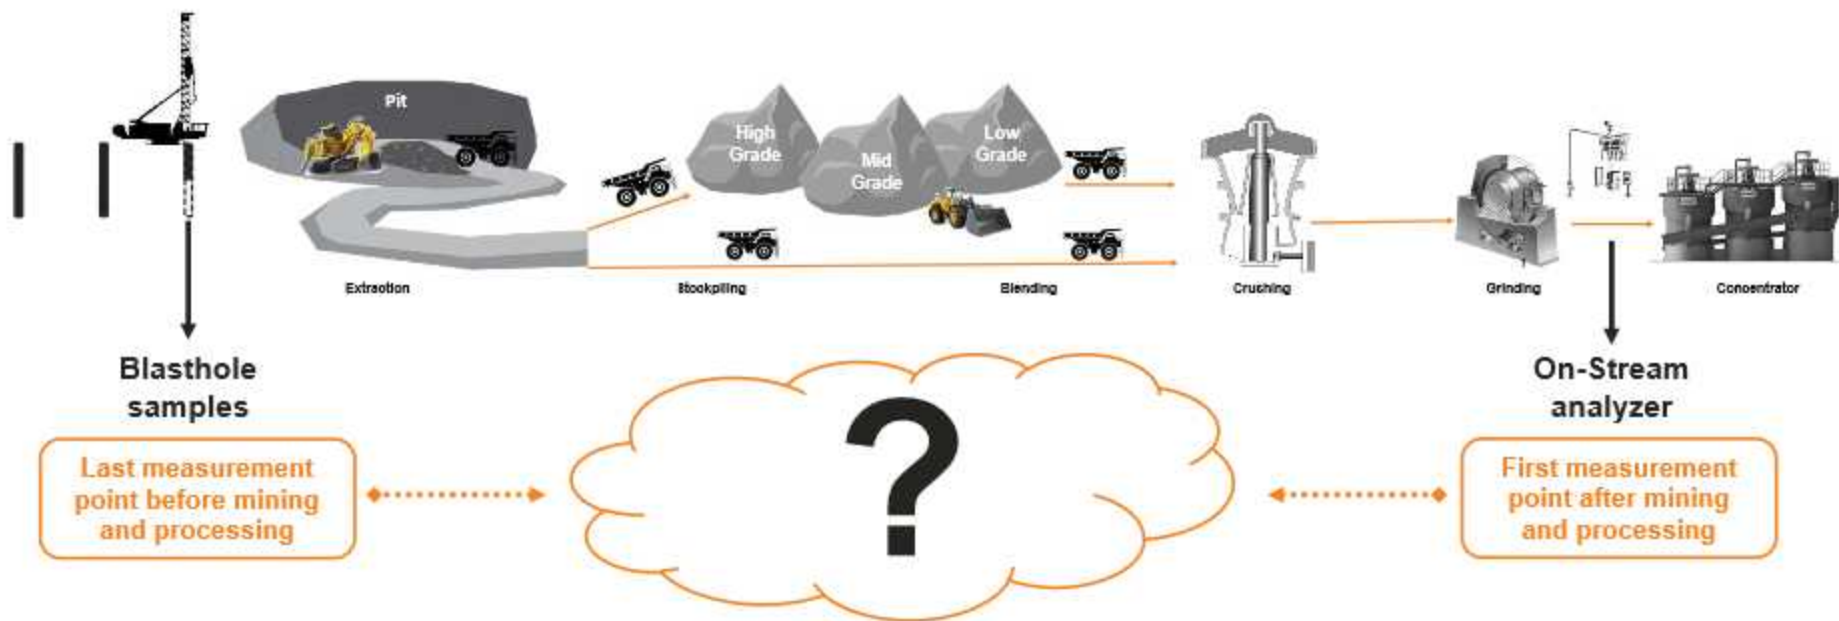

PRESENTATION OVERVIEW

- 1 MineSense Technologies
- 2 Mine-to-Mill data gap**
- 3 MineSense Mine-to-Mill Optimization
- 4 Conclusions

Mine-to-Mill Data Gap

Variable grades, hardness and changing mineralogy lead to plant sub-performance

PRESENTATION OVERVIEW

- 1 MineSense Technologies
- 2 Mine-to-Mill data gap
- 3 MineSense Mine-to-Mill Optimization**
- 4 Conclusions

MineSense Mine-to-Mill Optimization

Get ore grade in real-time

ShovelSense

Rope Shovel

Hydraulic Shovel

FEL

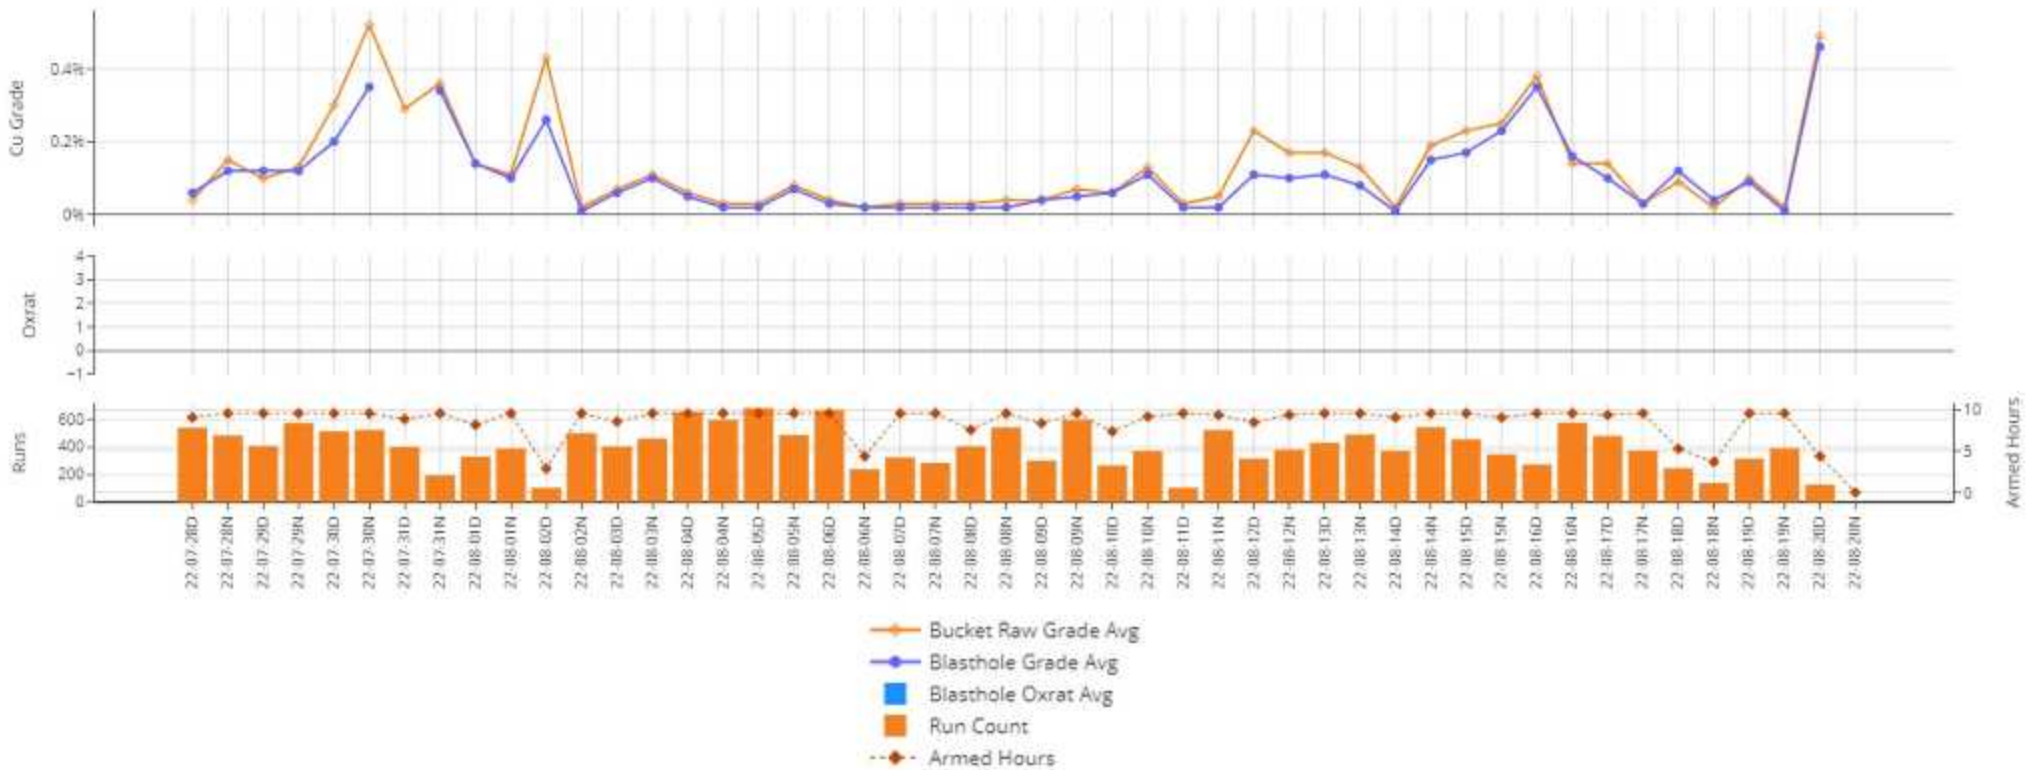

Bucket Grades in Real-Time

Waste and High Grade

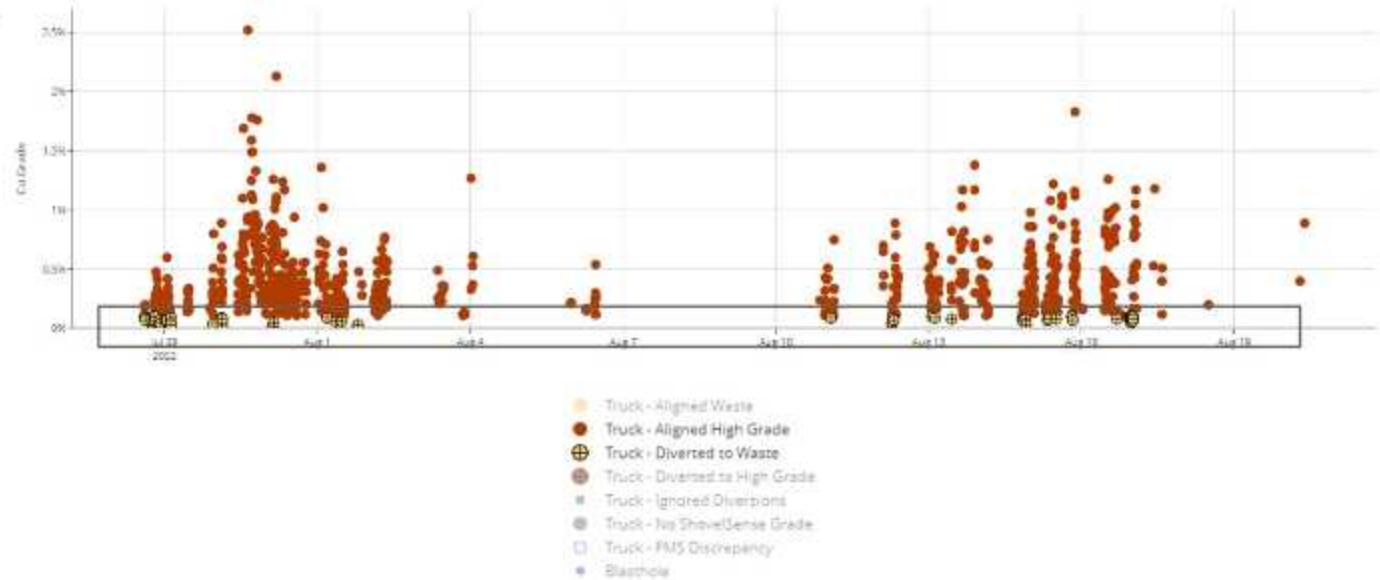

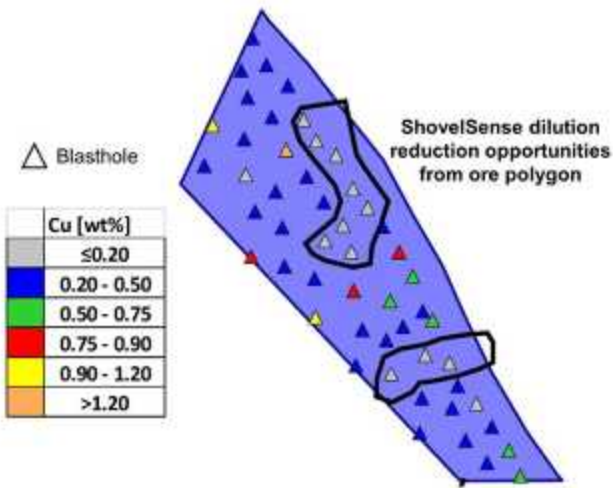

Shift Grade Trend Comparison

Copper Grade

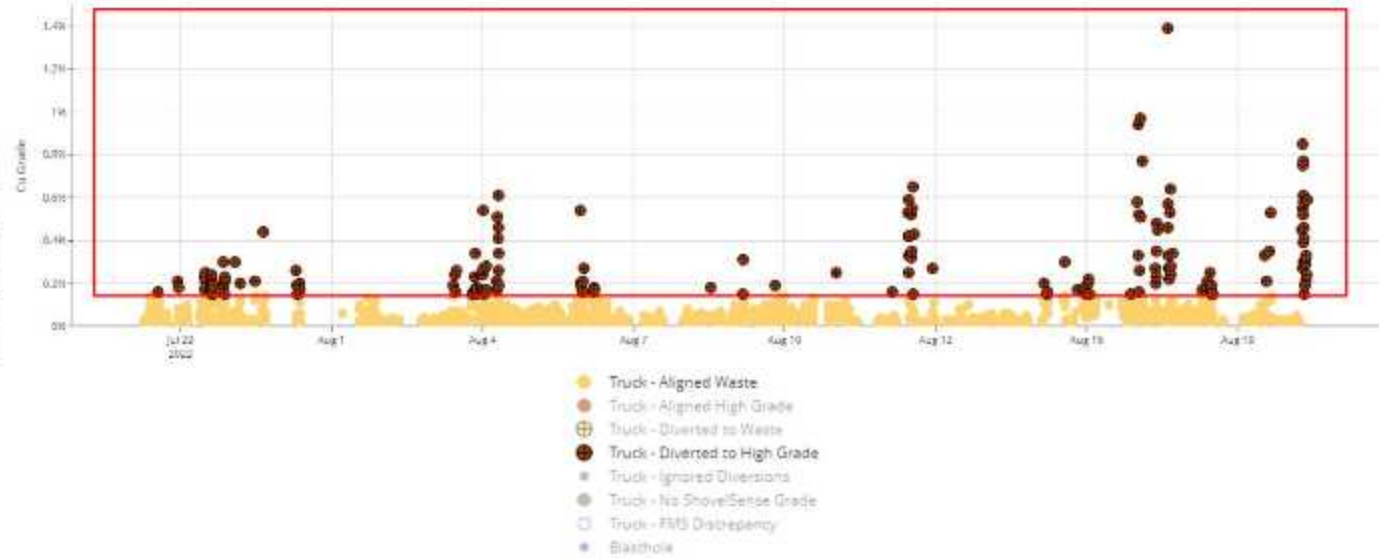

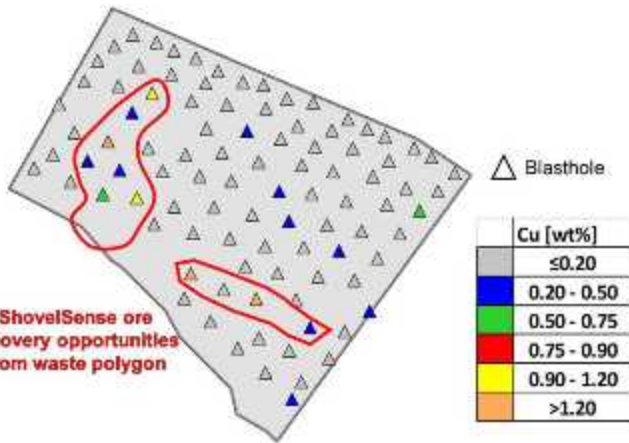

ShovelSense Ore Polygons Truck Grades

Dilution Control

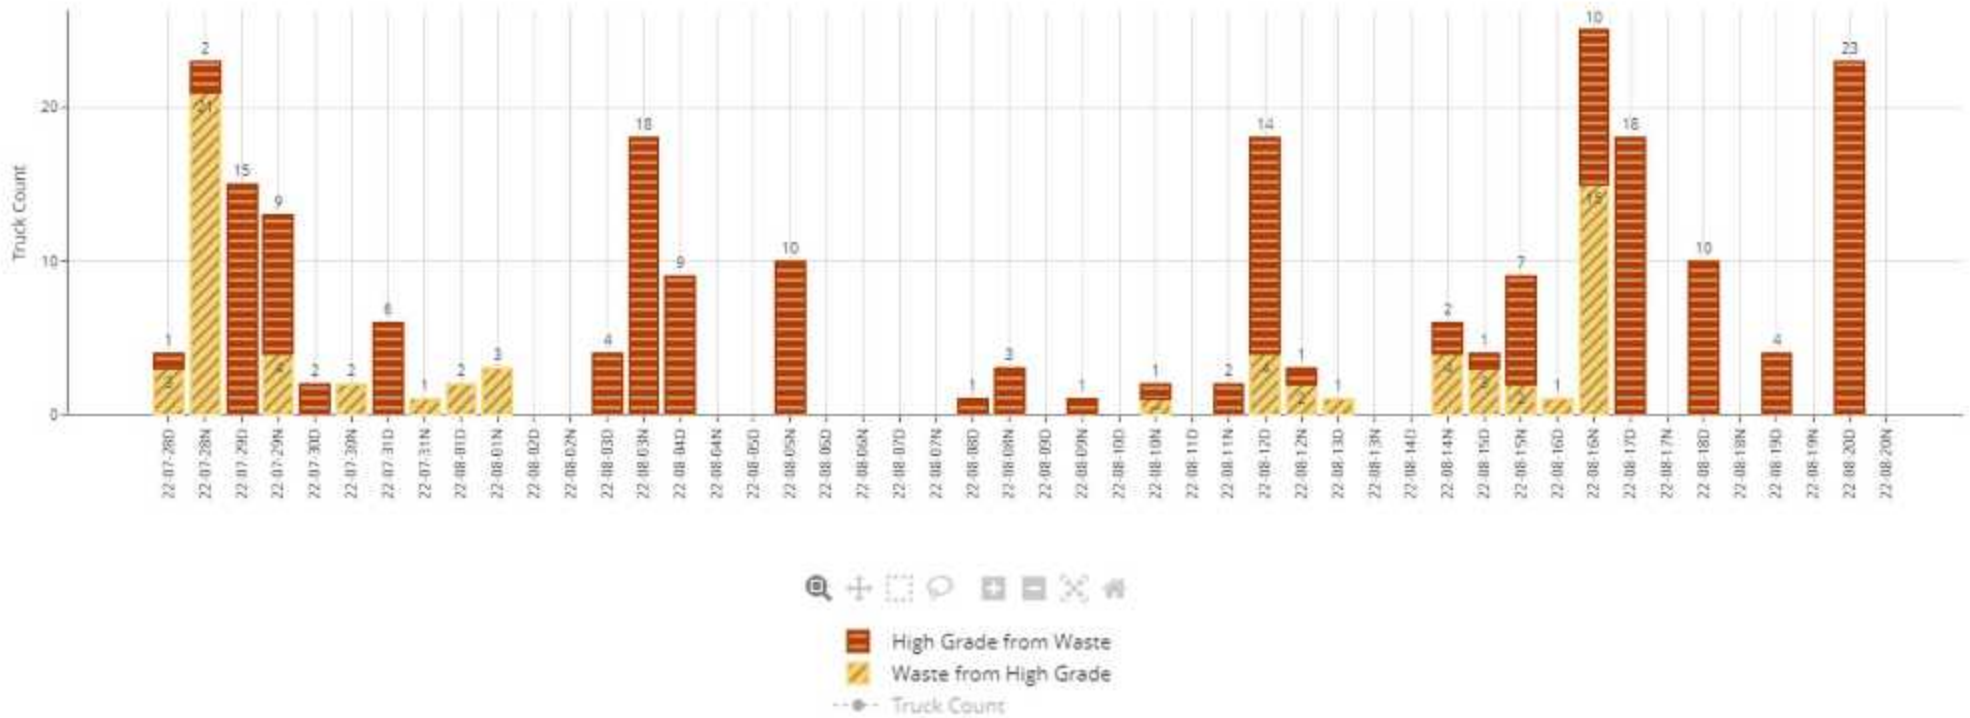

ShovelSense Waste Polygons Truck Grades

Ore Recovery

ShovelSense Grades in Real-Time

Truck Summary

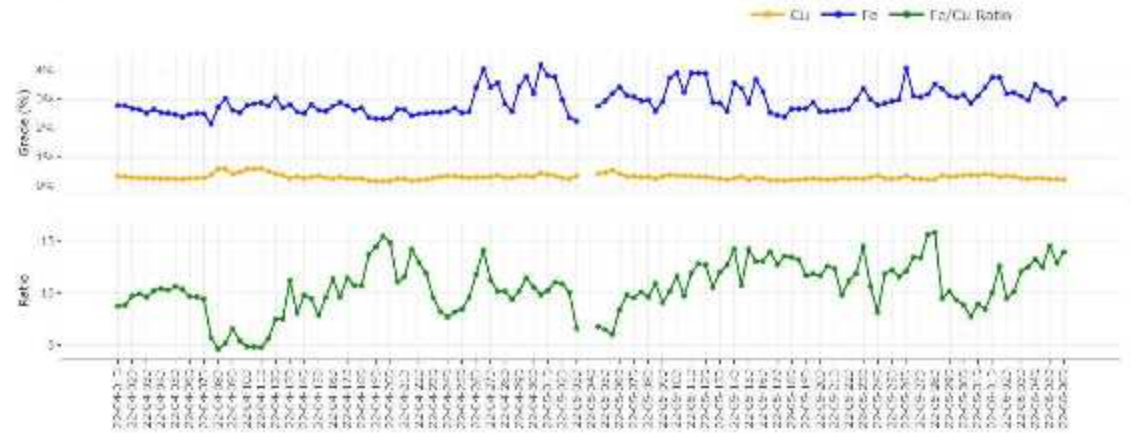

BeltSense Grades in Real-Time

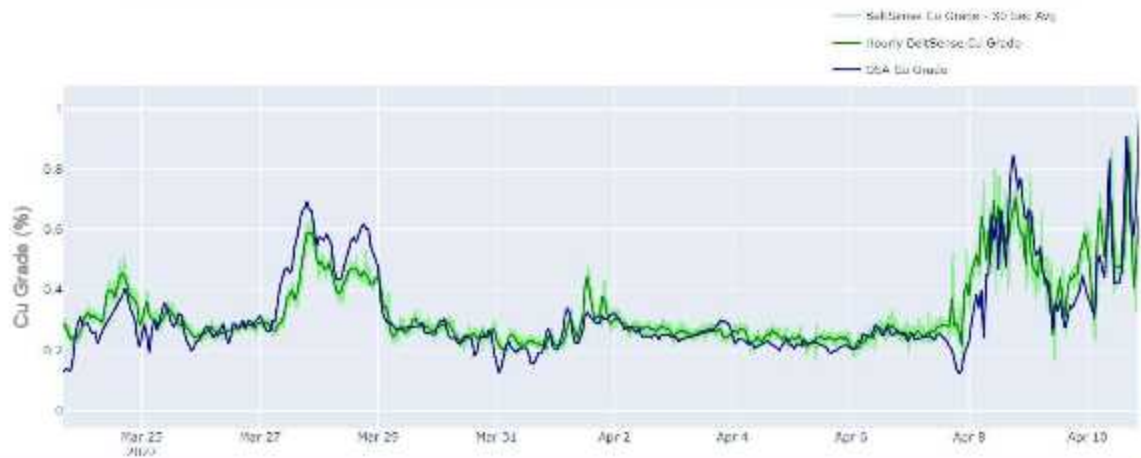

Mill Process Optimization

BeltSense Average Grades

BeltSense vs OSA Cu Grades

Aggregation of ShovelSense data to the crusher

Strong grade variability at the mine face – opportunity for grade engineering into the crusher

- Significant variation in Cu feed grades to crusher
- Potential to optimize feed sequencing to improve processing plant efficiency

Alignment of aggregated ShovelSense grades with BeltSense

Mixing through crushers and stockpiles reduces grade variability, but not entirely

- BeltSense aligns with ShovelSense
- Feed grade variation lesser after mixing during crushing and stockpiling

Alignment of MineSense grades with on-stream analyser

Remaining grade variation confirmed by on-stream analyser

- BeltSense and on-stream analyser align closely
- Opportunity to reduce grade variation through stockpiling and targeted truck sequencing?

PRESENTATION OVERVIEW

- 1 MineSense Technologies
- 2 Mine-to-Mill data gap
- 3 MineSense Mine-to-Mill Optimization
- 4 Conclusions**

Conclusions

- **High resolution and selectivity** at the face generates an improvement in the average head grade and stabilize downstream throughput grades.
- Having MineSense Mine-to-Mill Solutions allows a real-time reconciliation, **reducing uncertainty and operational risk.**
- MineSense Digital Solutions include the following **characterizations:**
 - Lithological
 - Mineralogical
 - Acid Generation
 - Acid Consumption
 - Grindability
